The American Indian Cancer Foundation (AICAF) is a nonprofit organization that was established to address the tremendous cancer inequities faced by American Indian and Alaska Native communities. AICAF’s mission is to eliminate the cancer burdens on American Indian/Alaska Native families through education, prevention, early detection, treatment and survivor support. It is with hard work, policy change, authentic community partnership and the wisdom of our ancestors that we hope to eliminate inequities and improve health outcomes.

Spreading awareness about cancer in our American Indian / Alaska Native communities is an important part of cancer prevention. Our American Indian Oral Cancer Prevention Project is designed to prevent oral cancer in American Indian communities. AICAF builds capacity by creating and sharing culturally appropriate resources such as this one.

As part of the American Indian Oral Cancer Prevention Project, AICAF has created this media toolkit. It includes a sample press release, our Prevent Oral Cancer in Indian Country resource and Facebook, Twitter and Instagram posts. The content can be easily copied and pasted into the social media platform of your choice. Please feel free to personalize these posts with pictures and information about your own community.

We respectfully ask that you acknowledge AICAF wherever materials are used by including the following message: Content provided by the American Indian Cancer Foundation.

If you have any questions or concerns, please contact Chris Johnson at cjohnson@aicaf.org

Enjoy!
Celebrate Oral Cancer Awareness Month with [YOUR ORGANIZATION]

[YOUR CITY] - [YOUR ORGANIZATION] is celebrating Oral Cancer Awareness Month this April. Oral cancer is the 6th most commonly diagnosed cancer in American Indian men in the Northern Plains. Oral cancer can be prevented through increased awareness and regular oral cancer screenings.

[YOUR ORGANIZATION] urges everyone to take part in Oral Cancer Awareness Month in the following ways:

**Get screened.**
Talk to your oral health care provider to learn more about oral cancer screenings and routine care. If found early, 75% of people survive. If found late, 20% survive.

**Avoid commercial tobacco.**
Tobacco exposes the mouth to cancer-causing chemicals. Learn more about tobacco cessation at AICAF.org/quit.

**Get the HPV vaccine.**
Boys and girls ages 9-26 can prevent HPV-related cancers like oral cancer by getting the HPV vaccine. Learn more about the HPV vaccine at AICAF.org/hpv.

**Chat with us.**
Join us and the American Indian Cancer Foundation for a #OralCancer411 Twitter Chat on April 11 at 1pm CST to learn more about ways to prevent oral cancer in your community.

**Learn.**
Discover resources on oral cancer in American Indians at AICAF.org/oral-cancer.

**Join our community.**
Like the [YOUR ORGANIZATION] on Facebook, follow us on Twitter, like us on Instagram and sign up for our newsletter.

What is oral cancer?
Cancer is a disease where cells in the body grow out of control.
Oral cancer is a disease where cancer cells form in the mouth, lips, cheeks, gums, tongue, hard palate, tonsils and the throat.

What can I do?

Avoid Commercial Tobacco
Tobacco exposes the mouth to cancer-causing chemicals. Learn more at: AICAF.org/quit

Limit Alcohol Use
Alcohol can cause cancer by damaging DNA

Get Vaccinated against HPV
HPV (human papillomavirus) infects oral cells. HPV often has no symptoms. Vaccinating is essential. Learn more at: AICAF.org/hpv

Limit Sun Exposure
Sun exposure can cause lip cancer. Use a lip balm with sunscreen to protect your lips from harmful sun exposure

Maintain Healthy Weight and be Active
Poor diet and lack of exercise can make it easier to develop cancer
An oral cancer screening can detect early signs of cancer.

Early detection is important. If found early, 75% of people survive. If found late, 20% survive.

During the screening, a dentist or hygienist will examine your face, neck, lips, tongue, mouth, and the back of your throat for abnormalities.

The screening is quick, painless and is performed during your regular dental appointment.

If your dentist does not give an oral cancer screening at every visit, ask for one.
